

-----Project Manager Agent Bugs

1.Data Integrity & Business Logic Issues

Bug ID	Component	Issue Description	Expected Behavior
BUG-01	Create Project	No unique constraint on Project Name. Multiple projects can be created with the identical name.	The system should prevent duplicate project names per workspace, or show a warning to the user.
BUG-02	Create Project	Invalid Budget Logic. The system accepts a "Max Budget" value that is lower than the "Min Budget" (e.g., Min: \$1000, Max: \$500).	"Max Budget" must be validated to ensure it is always greater than or equal to "Min Budget."
BUG-03	Dashboard	Metric Count Cap. After creating 10 projects, the dashboard counter stops incrementing and remains capped at 10.	The dashboard metrics should dynamically increment past 10 without arbitrary limits.

BUG-04	Project Pilot	Relational Constraint Failure. The Project Pilot successfully executes commands to create tasks for parent projects that do not exist.	The agent must reject task creation if the target project is not found in the database.
BUG-05	Knowledge Q&A Agent	System Prompt Leakage. The Knowledge Q&A Agent is giving wrong answers and happily outputting cake recipes.	Strict system prompt constraints must be implemented to keep the AI focused strictly on workspace data.
BUG-06	Timeline & Gantt	Chronological Logic Inconsistency. Tasks can have deadlines set even if the parent project has no deadline or timeline defined.	Task timelines must be bound by, or prompt the setting of, the parent project's timeline boundaries.

2. Security & Data Flow Gaps

Bug ID	Component	Issue Description	Expected Behavior
--------	-----------	-------------------	-------------------

BUG-07	Project Pilot	Unrestricted File Uploads. No file size limits or strict extension restrictions are enforced on the document upload feature.	Strict file size limits (e.g., max 10MB) and strict mime-type checks must be implemented to prevent server memory exhaustion.
BUG-08	Create Project	Incomplete Update Schema. If a user skips optional fields during project creation, they cannot add them later because the "Update Project" screen lacks those fields.	The "Update" interface should have parity with the "Create" interface so all data fields are editable.
BUG-09	Inconsistent Authentication State Across Browsers	Logging out from one browser leaves other active browser sessions in a partially authenticated state. The user remains on the dashboard, but protected features become inaccessible and API requests return 403 Forbidden until they manually log out and log back in.	If the session becomes invalid, the application should automatically clear the authentication state and redirect the user to the login page, instead of leaving the user in a partially authenticated state.

3. UI/UX & Interaction Design Flaws (Usability)

Bug ID	Component	Issue Description	Expected Behavior
UX-10	Global Tabs	No Unsaved Changes Warning. If a user fills out a form and clicks to another tab, the system immediately wipes the typed data without warning.	Changing tabs with a dirty form state should trigger a warning modal (" <i>You have unsaved changes. Are you sure you want to leave?</i> ") or preserve the draft.
UX-11	Global Tabs	No Tab Route Persistence. Reloading the browser from any tab redirects the user back to the "Overview" page instead of preserving their active tab.	The application should use route-based tab states to preserve the user's active view on refresh.
UX-12	Create Forms	Inconsistent Button States. The "Create Task" submit button is disabled until inputs are typed, but "Create Project" submit button remains active immediately.	UI consistency standard: Submit buttons on empty mandatory forms should all default to disabled.

UX-13	Conversations	No Deletion Confirmation. Clicking the trash icon next to a past chat history immediately deletes the thread without asking for confirmation.	A simple confirmation modal must be triggered to prevent accidental history loss.
UX-14	Project Pilot	Confusing Feature Mapping. Why is there an "Upload" button directly in the chat box if this workspace is meant for conversational task management?	If the Upload button is for RAG (retrieval-augmented generation), it needs a clearer visual description or placement.
UX-15	Task Prioritization	Unchecked Action Execution. Running "Prioritize Tasks" on a project with 0 tasks triggers a successful process that yields empty or confusing results.	The button should be disabled, or the AI should state: <i>"No tasks found to prioritize."</i>
UX-16	Task Prioritization	Orphaned Subtasks. The subtask generator says "generated 0 subtasks" when no tasks exist. If it does generate subtasks, it is unclear where they are saved or viewed.	The system needs to specify the output target of the subtasks and gracefully handle the 0-task state.

UX-17	Timeline & Gantt	Text Overlapping. The text labels inside the Gantt chart overflow and override each other, making the visualization unreadable.	CSS container/flex styling or truncation needs to be applied to Gantt chart labels.
UX-18	AI Agent	No Stop Button. There is no mechanism to stop or cancel an active AI generation (streaming text).	A "Stop Generating" button should be added during streaming states.

Recruitment Agent Bugs

Bug ID	Component	Issue Description	Actual Behavior	Expected Behavior
---------------	------------------	--------------------------	------------------------	--------------------------

REC -BU G-01	AI Questions	Retrieval Hallucination & Character Truncation	In _get_recruitment_ data, fields like requirements are hard-truncated . If a user asks about a requirement past 300 characters (e.g., ' <i>Cobol-on-Wheelbarrow</i> '), the AI does not receive the context and confidently hallucinates: <i>"There is no mention of this in the requirements."</i>	The backend should avoid aggressive character truncation, or the prompt must clearly state if data has been truncated. LLM grounding guardrails must be tightened.
-----------------------------	---------------------	---	--	---

UX State & Form Flow Defects

Bug ID	Component	Issue Description	Actual Behavior	Expected Behavior
-------------------	------------------	------------------------------	----------------------------	--------------------------

REC- BUG- 02	CV Processing	Data Loss on Guided Redirectio n ("Fix Settings")	The system prompts users to leave the page with a <i>"Fix Settings ->"</i> link, but doing so completely wipes their uploaded CV files and manually typed keywords upon return.	The form state, selected files, and inputted keywords should be temporarily cached (using Session Storage or global state) so the data is preserved on return.
REC- BUG- 03	API Tester	Missing File Reset / Removal Mechanis m	Once a file is selected, there is no visual cross (X) or "Remove" button, forcing the user to reload the entire page if they change their mind and want to paste text instead.	A clear remove icon must be added to reset the file input state without requiring a full page refresh.

REC- BUG- 04	Saved Prompts	Hidden Back Navigation on Favorites Toggle	Clicking the Favorite button collapses it into a tiny unlabeled purple star. The text disappears, leaving no clear indicator or "Back" button to return to All prompts.	The button should maintain its size, or toggle its text to something clear like Show All Prompts to provide an obvious way to navigate back.
-----------------------------	--------------------------	---	---	--

Frontline Agent Bugs

Bug ID	Component	Issue Description & Steps to Reproduce	Actual Behavior	Expected Behavior
FRONT LINE-B UG-01	Hand-offs Tab	Accept Hand-off button crashes the entire panel. To reproduce: Open any pending ticket from the Hand-offs queue, and click the "Accept hand-off" button.	The whole panel crashes instantly. A red React error boundary box appears saying: "This section failed to render: RotateCcw is not defined" .	The ticket assignment should update in the database and the status badge should smoothly transition to active without crashing the UI.

FRONT LINE-B UG-02	Hand-offs Tab	Reassign button throws a fatal JS TypeError. To reproduce: Open any pending ticket from the Hand-offs queue, and click the "Reassign..." button.	A red error toast pops up saying: "Failed to load agents: frontlineAgentService.listWorkflowCompanyUs... is not a function". (Typo or missing export. The frontend is calling a function that doesn't exist or is spelled incorrectly in the service file).	It should open a clean dropdown showing other available team members to reassign the ticket to.
FRONT LINE-B UG-03	Public Chat Widget	Public Chat widget crashes when typing random text. To reproduce: Open the public chat page, type random gibberish like "dejheuhfruf" and press Enter.	The backend API throws a 500 error. The client screen displays a red error box: "Sorry, something went wrong: Failed to process question".	The system should handle the ungrounded query gracefully and return a fallback message like: "I didn't quite catch that. Could you please rephrase?"

FRONT LINE-B UG-04	Chat Widget Config	Theme settings allow completely corrupted styling text. To reproduce: Type random garbage text (like "---000" for font and "1@@@3" for colors), click "Save theme", then open the public chat page.	The form saves successfully. When you open the public chat page, the browser cannot compile the garbage CSS, causing the entire chat UI to render as a solid black, unreadable box.	The inputs should validate color hex-codes ("#FFFFFF") and measurements, blocking the save if the inputs are not valid CSS.
FRONT LINE-B UG-05	Knowledge Q&A	Q&A Agent can't see basic document list or dates. To reproduce: Ask the agent: "What documents currently exist in our knowledge base?" or "When was test.txt uploaded?"	The agent has no access to document SQL metadata. It does a semantic search, pulls random text chunks from unrelated PDFs, and tries to read those files to find the upload list/dates.	The agent should check the database registry directly to accurately list file names and dates.

FRONT LINE-B UG-06	Hand-offs Tab	"Send Reply" fails on internal KB gap tickets. To reproduce: Open a pending internal KB gap ticket (where the Customer field is blank/ "—"), type a reply, and click "Send reply".	The action fails. A red toast notification pops up saying: "Send failed: No recipient available". (The backend is trying to send a socket/email to a customer that doesn't exist).	The "Send reply" action should be disabled for internal tickets, or turned into an "Internal Note/Resolve" button.
FRONT LINE-B UG-07	Knowledge Q&A	Outdated documents are still visible in the Q&A dropdown. To reproduce: Mark "test.txt" as outdated on the Documents tab. Go to Knowledge Q&A, and check the "Add document" dropdown list.	The outdated file "test.txt" is still fully visible and selectable in the dropdown list, causing a dead-end UX loop.	Outdated files should be filtered out of the dropdown selection list, or marked with a disabled "(Outdated)" badge.
FRONT LINE-B UG-08	Analytics Tab	Date pickers accept impossible dates and year limits. To reproduce: Type an impossible date like February 31st	The system accepts the invalid input and tries to run database analytics queries over this impossible date range.	The date picker must validate calendar boundaries (rejecting Feb 31st) and enforce reasonable

		(02/31/0343) or a 6-digit year like "232333" into the date fields and click "Load".		constraints on the year input.
FRONT LINE-B UG-09	Chat Widget Config	Allowed origins field accepts double commas and spaces. To reproduce: Type a malformed string (like "https://example.com, , https://app.example.com,") and click "Save".	The form accepts and saves the malformed string directly, which will break CORS origin matching headers.	The backend should sanitize, trim whitespace, and discard empty/duplicate elements before saving.
FRONT LINE-B UG-10	Analytics Tab	Analytics confuses "Documents" with "Tickets." To reproduce: Ask the analytics search box: "how many documents exist".	The AI queries the tickets database, returns the active ticket count (4), and displays: "There are 4 documents (tickets) in total," contradicting the actual document count (5).	The agent should query the actual document count, or specify that it is counting support tickets.

FRONT LINE-B UG-11	Documents Tab	Choose File button is almost completely invisible. To reproduce: Click "Upload Document" and look at the "Choose File" button.	The button is rendered in a dark grey/black background on a dark grey modal, making it incredibly hard to see in dark mode.	The button should use a high-contrast background color so users can easily find it.
FRONT LINE-B UG-12	AI Graphs Tab	"Save Prompt" button is active on failed/empty generations. To reproduce: Type an off-topic prompt (like "whats the weather"), click "Generate graph", and look at the "Save Prompt" button.	Even though generation failed with "No data available", you can still save the blank/failed prompt.	The button should be disabled if the generation fails or returns empty data.

AI Executive Meeting Agent

Bug ID	Component	Issue Description & Steps to Reproduce	Actual Behavior	Expected Behavior
EXEC-BUG-01	Documents Tab	Critical AI Prompt Template & Instruction Leak. To reproduce: Generate an "Executive Briefing" document manually with a minimal title (e.g., 00) and leave the "Background/Context" field empty, then click "Generate & Save" to open the completed view.	The AI fails to generate any actual content and instead leaks its raw system template prompts, including literal developer placeholders like [DD MMM YYYY], [Name / Department], and raw instruction strings inside brackets like [2-3 sentences: What is this briefing about...] directly on the output page.	The prompt should enforce strict fallback handling. If data is minimal, the LLM must write generic, clean, complete paragraphs instead of leaking bracketed instructions.

EXEC -BUG- 02	Tasks Tab	Acceptance of Past Due Dates. To reproduce: Open the "Add Task" modal. Set the Due Date to a past date (like July 16, 2026, when today is July 23, 2026) and click "Add Task".	The system accepts the past date and successfully saves the task as "overdue" on day one in the database without any warnings or error blocks.	The date picker should restrict selections to future dates only, or throw an validation warning.
EXEC -BUG- 03	Documents Tab	Editable Fields During Active "Generating..." State. To reproduce: Fill out the document generation form and click Generate & Save . While the button shows the spinning "Generating..." loader, try typing inside the "Audience" input box.	Input fields remain completely active and editable while the AI is generating, risking serious frontend/backend data mismatches if the user alters inputs mid-generation.	All text fields, textareas, and dropdowns must be disabled as soon as the active saving state begins.

EXEC -BUG- 04	Meetings Tab	Visual Spacing and Accidental Close Hazard in Header. To reproduce: Generate any document to open the completed modal view, then look at the "Download PDF" and "X" (Close) buttons in the top-right of the header.	The "Download PDF" link and "X" close icon are crammed right next to each other with zero padding, creating a high risk of accidental close clicks when users try to download the file.	A safe padding gap (at least 16px to 24px) should separate the action triggers to prevent user frustration.
EXEC -BUG- 05	Documents Tab	Developer Placeholder Leak on Manual Generations. To reproduce: Generate an Agenda document manually (setting the Link meeting dropdown to "None") and open the generated document view.	Because there are no meeting attendees, the AI prints a raw developer placeholder string in the text: "Attendees: [Name, Role]".	If attendee data is missing, the "Attendees" line should be omitted entirely or default gracefully to "N/A".

HR Support Agent

Tab

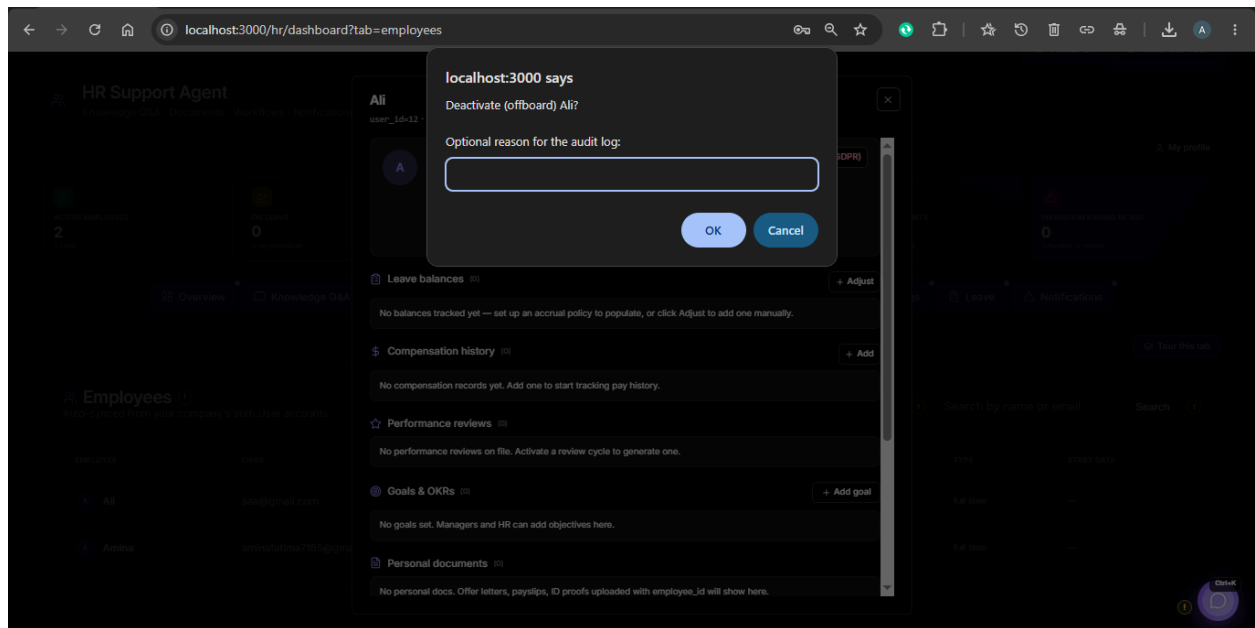

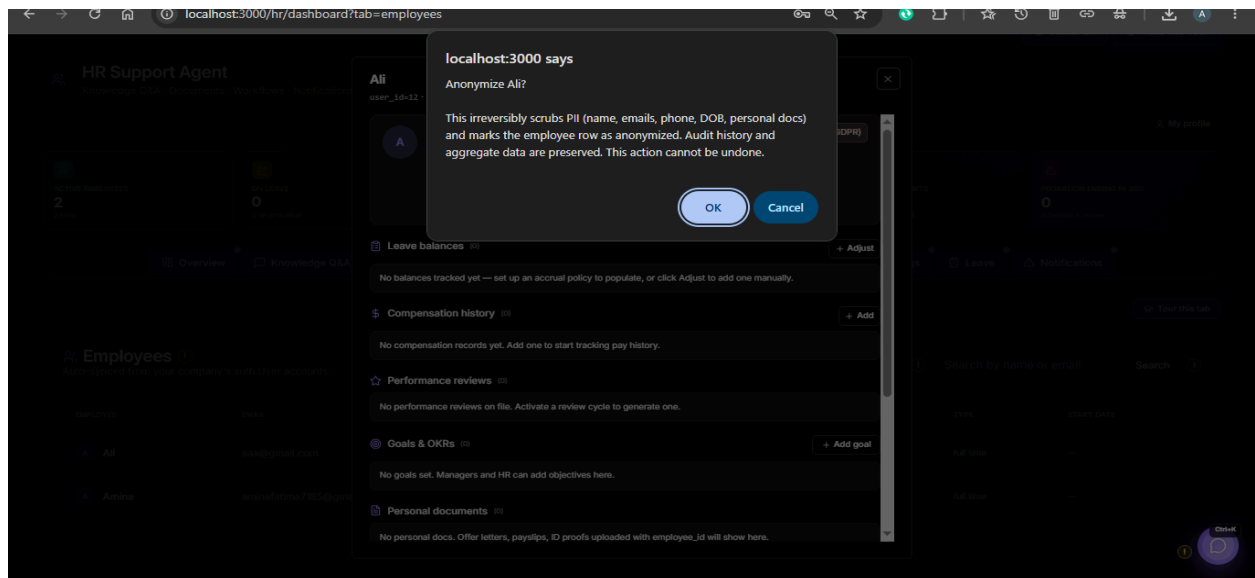

Employees

Description/Steps to reproduce

Go to employees tab

Click on any employee

Click on “deactive” or “Anonymized” buttons, they give system alerts instead of a modal.

Bug /Improvement 02

Tab

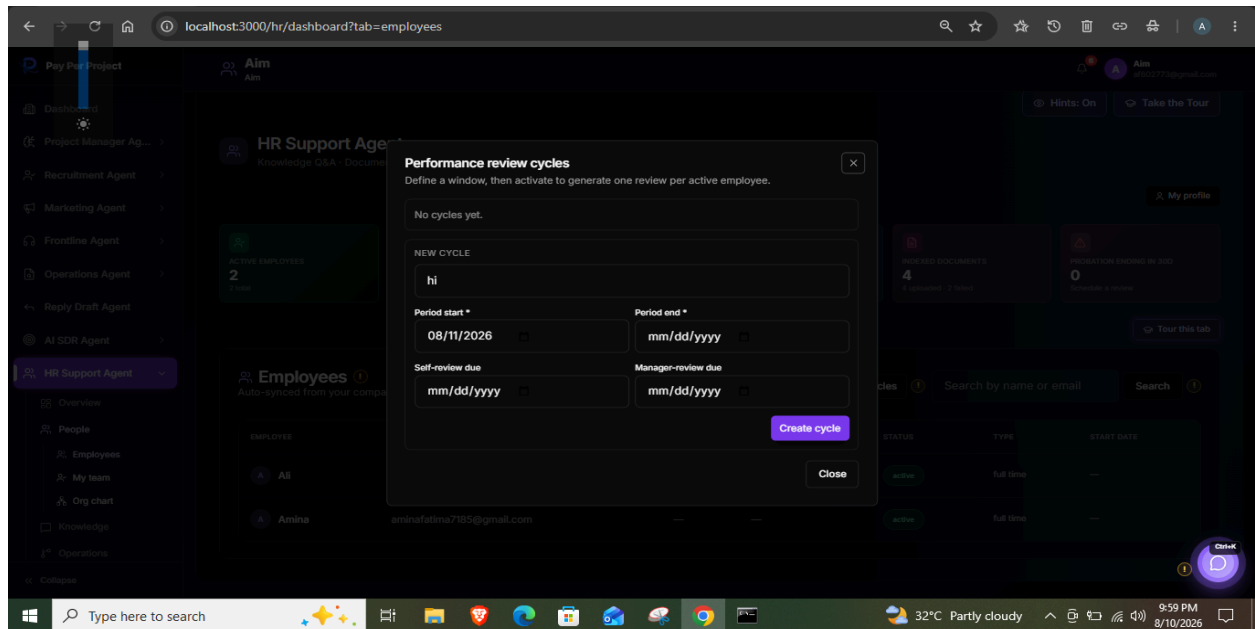

Employees

Description/Steps to reproduce

Go to employees tab

Click on “Review Cycles”

The date picker is not visible.

Bug /Improvement 03

Tab

Employees

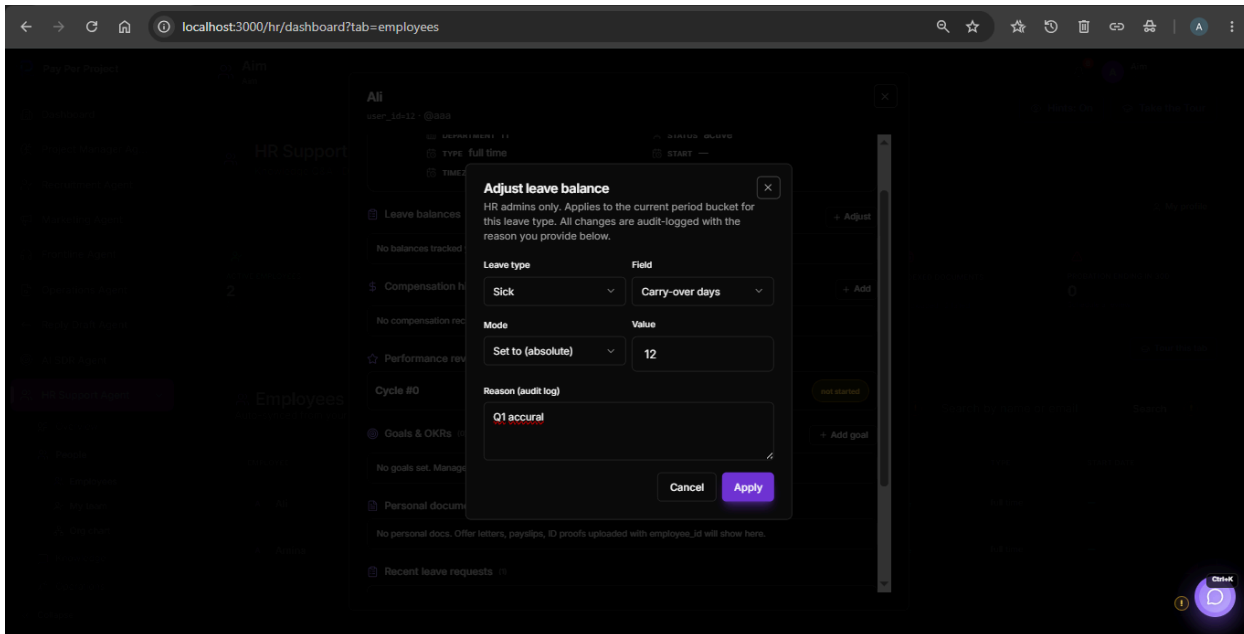

Description/Steps to reproduce

Go to employees tab

Click on any employee.

Click on “Adjust” button alongside Leave Balances.

The “Apply” button is not working.

Bug /Improvement 04

Tab

Employees

Description/Steps to reproduce

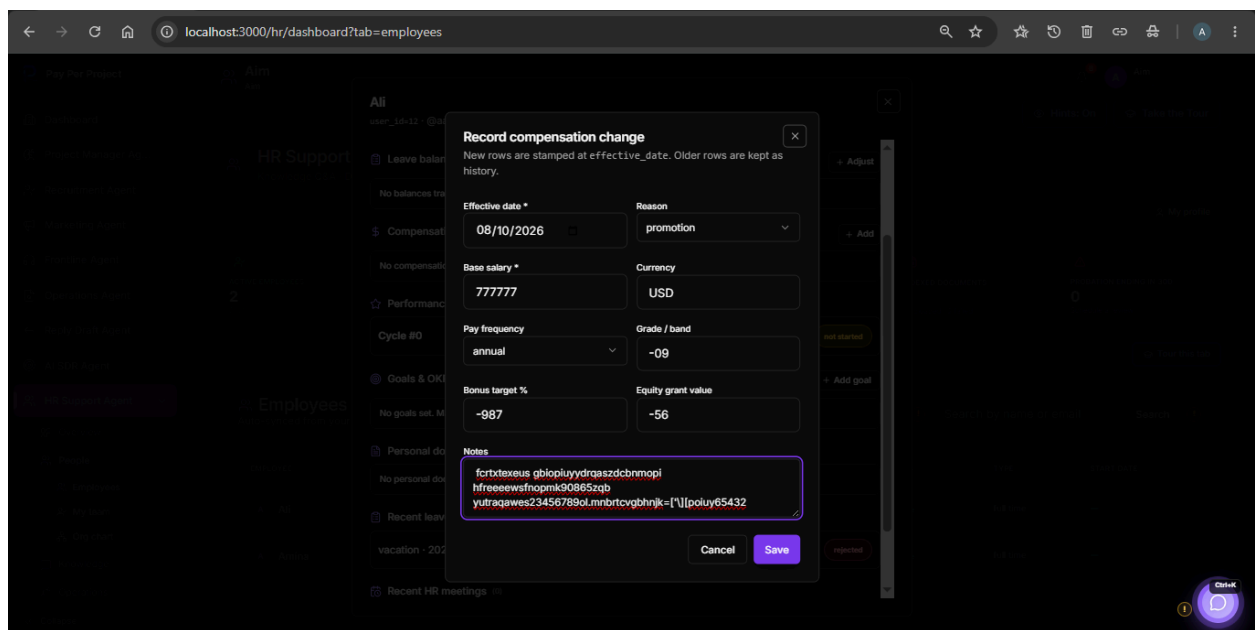

Go to employees tab

Click on any employee.

Click on “Add” button alongside Compensation Hlstory

There’s no validation on numerical fields.

Negative numbers are getting accepted for bonus etc.

Bug /Improvement 05

Tab

Employees

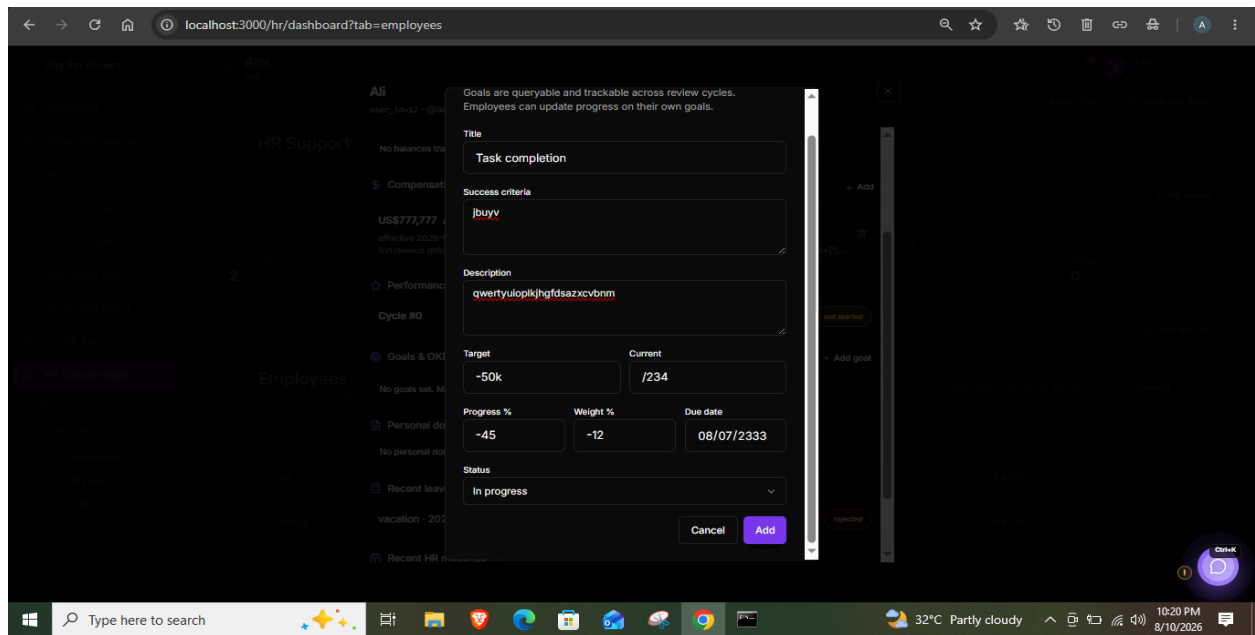

Description/Steps to reproduce

Go to employees tab

Click on any employee.

Click on “Add Goal” button alongside Goals & OKRs.

No validation on numerical and due date fields.

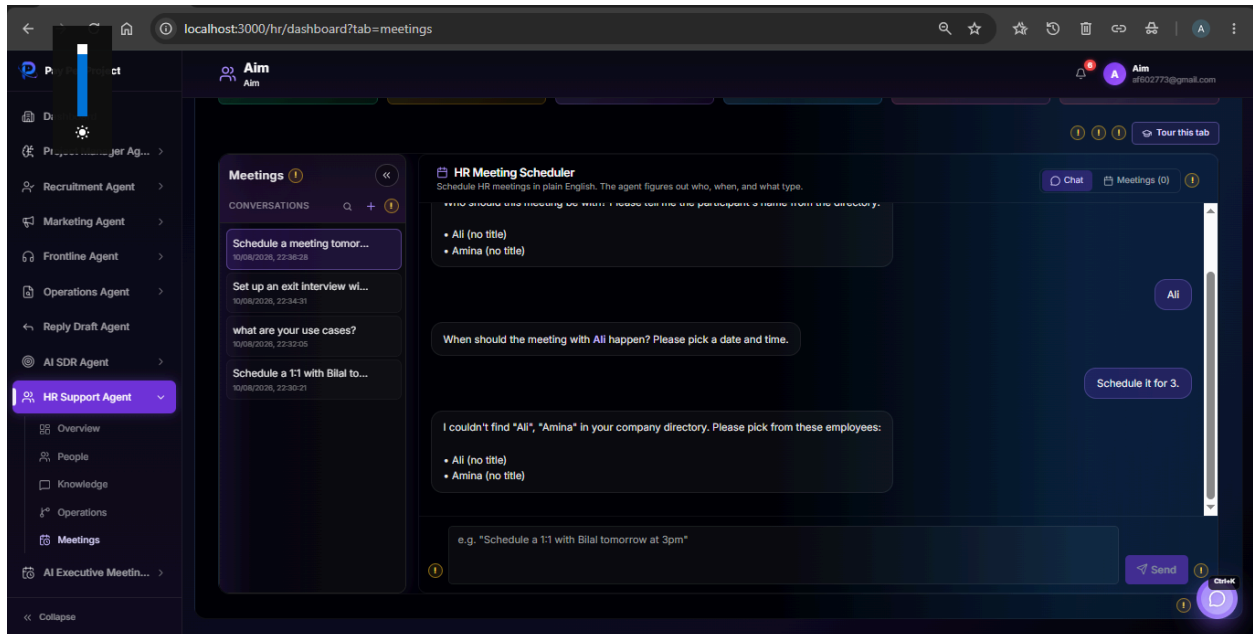

Bug /Improvement 06

Tab

Meeting Scheduler

Description/Steps to reproduce

The agent loses selected participants during multi turn scheduling.

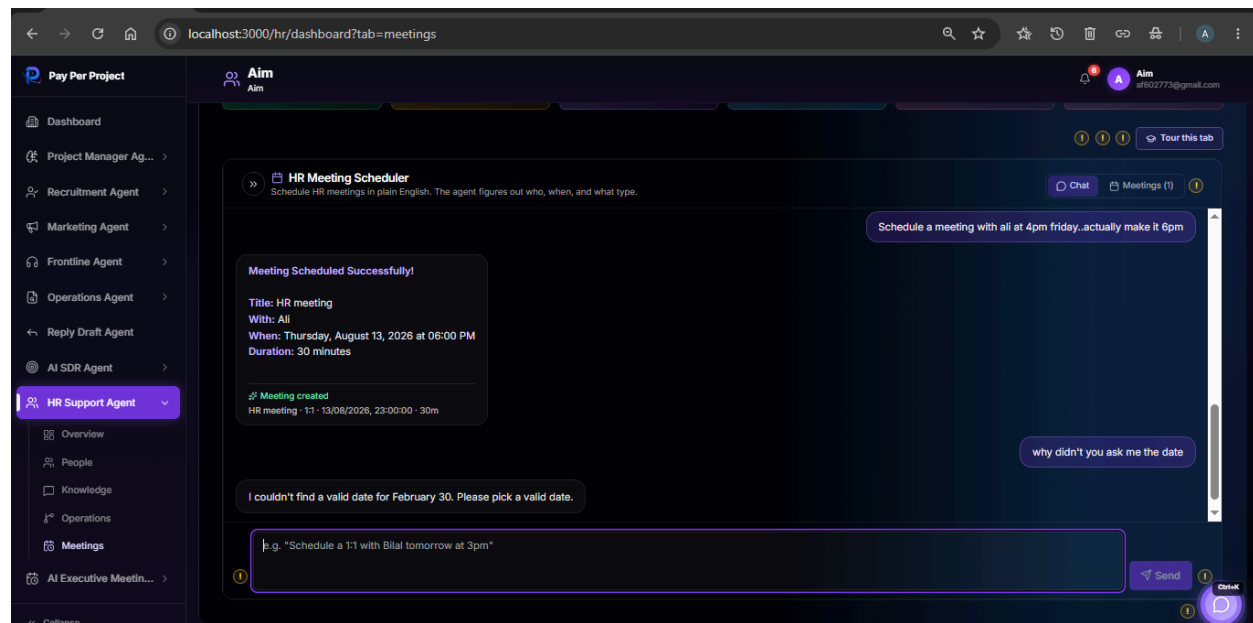

Bug /Improvement 07

Tab

Meeting Scheduler

Description/Steps to reproduce

Meeting Scheduler schedules meetings on an incorrect date when relative weekdays are provided.

Marketing Agent

Bug /Improvement 01

Tab

Campaigns

Description/Steps to reproduce

Go to “Create Campaign tab” Generate campaign with AI, click on Edit details

Set Start date after End date, it will get accepted. Also negative age is getting accepted.

The screenshot shows a web browser at localhost:3000/marketing/dashboard?tab=campaigns. The 'Marketing Agent' tab is selected in the sidebar. The main content area displays an 'AI-GENERATED CAMPAIGN' form for 'Fanta'. The form includes the following fields:

- Target leads:** 5000
- Target conversions:** 2000
- Age range:** -09
- Location:** Global, with a focus on urban areas
- Industry:** Food and Beverage
- Company size:** 1-10 (individuals) or 11-50 (small business)
- Interests:** entertainment, music, fashion, travel, food
- Language:** English, Spanish, Portuguese, and other w
- Start date:** August 26th, 2026
- End date:** August 12th, 2026

At the bottom of the form, there are buttons for 'Back to preview' and 'Create campaign'. The background shows a blurred view of the campaign details page.

Bug /Improvement 02

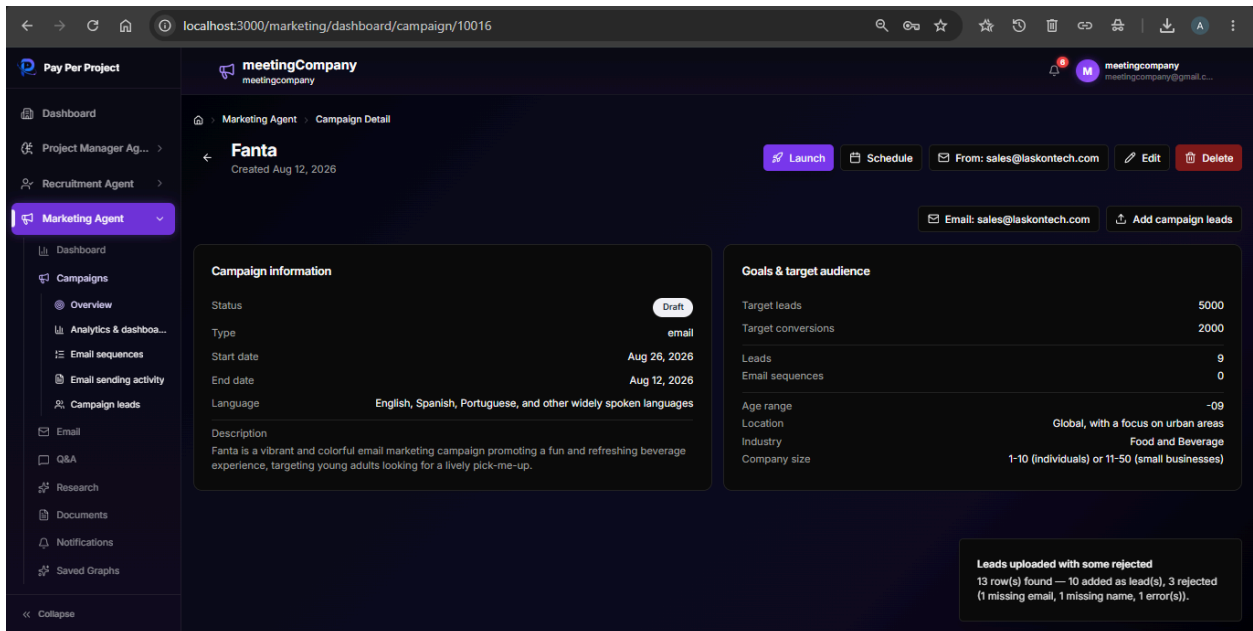

Tab

Campaigns

Description/Steps to reproduce

Go to any campaign and click “Manage” Go to “Add campaign leads” and upload a CSV file containing invalid lead data.

The system partially uploads the file and shows the number of successfully added and rejected leads, but the rejected rows/errors are not clearly identified. The message only displays a generic count such as “**1 error(s)**” without specifying the affected row, field, or reason for rejection. The system should provide detailed row-level feedback, including the **row number**, **field**, and **reason for rejection**, so the user can identify and correct the invalid data.

Bug /Improvement 03

Tab

Campaigns

Description/Steps to reproduce

Go to any campaign and click “Manage” Go to “Add campaign leads”

The “**Choose File**” button is not clearly visible/accessible in the file upload section, making it difficult for the user to select a file.

Suggestion:

Provide a **preview of the uploaded file** before submission. The preview should allow the user to verify the uploaded data/columns and ensure the correct file has been selected before clicking **Upload**.

meetingCompany

email

lead@example.com

The lead's email address. Rows without this are skipped.

first_name

John

Used for personalization tokens like {{first_name}}. Rows with neither first nor last name (and no "name" fallback) are skipped.

last_name

Doe

Used for personalization tokens like {{last_name}}. Rows with neither first nor last name (and no "name" fallback) are skipped.

Optional columns

Skip any you don't need

name

John Doe

Single-name fallback. Used only when first_name and last_name are both blank — split on the first space to satisfy the name requirement.

phone

+1 555 010 0100

Optional contact number; not used for sending.

company

Acme Inc.

Available as {{company}} in templates.

job_title

Sales Manager

Available as {{job_title}} in templates.

Bug /Improvement 04

Tab
Q&A

Description/Steps to reproduce

Ask the agent a question related to campaign data.

The agent returns a response that is unrelated to the asked question instead of providing the relevant campaign information.

Bug /Improvement 05

Tab
Q&A

Description/Steps to reproduce

Ask the agent a question about a specific campaign and then ask a follow-up question referring to the same campaign.

The agent fails to maintain the context of the previous conversation and asks for additional context instead of understanding the reference.

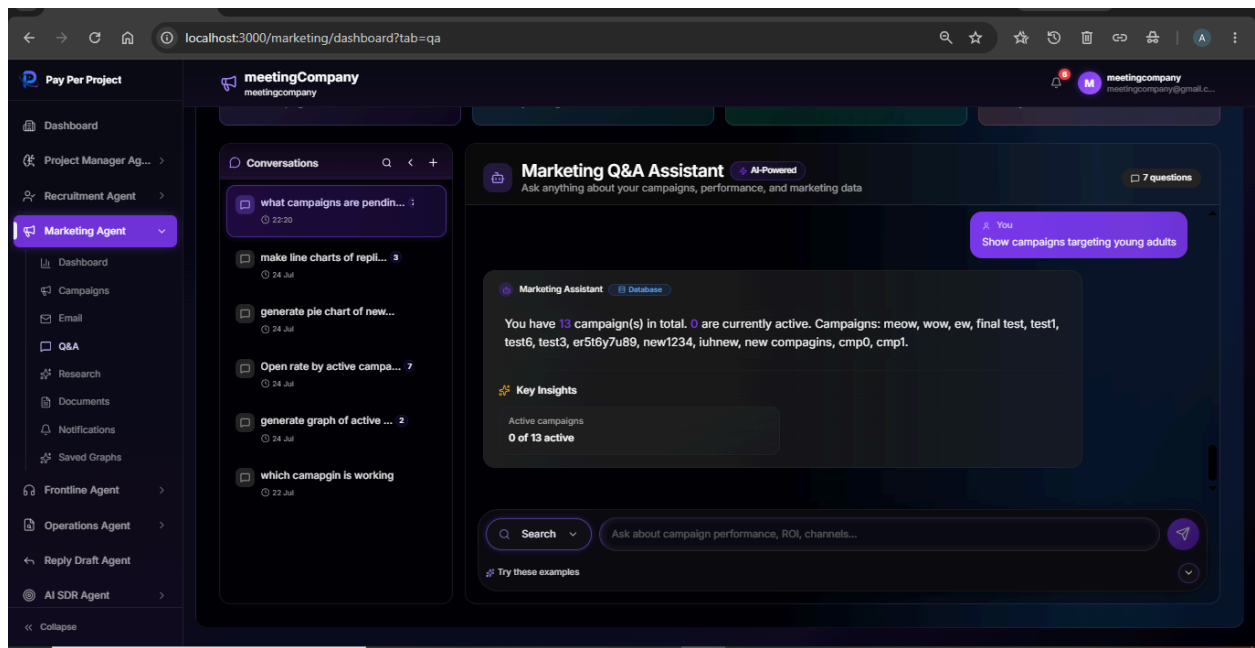

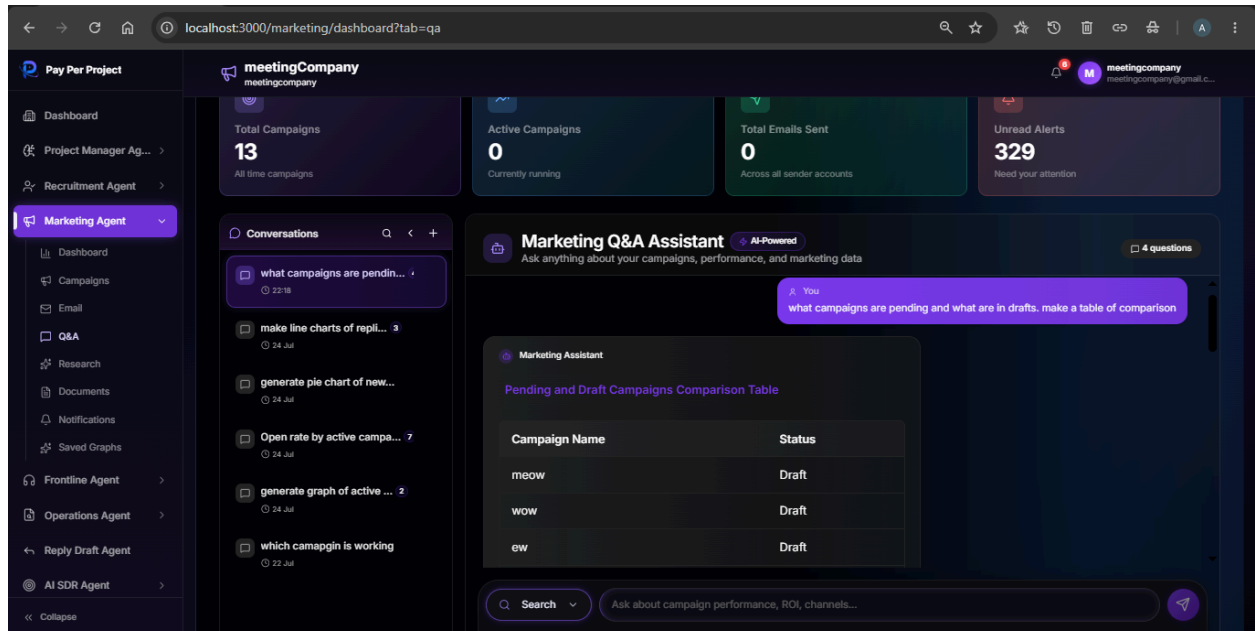

Bug /Improvement 06

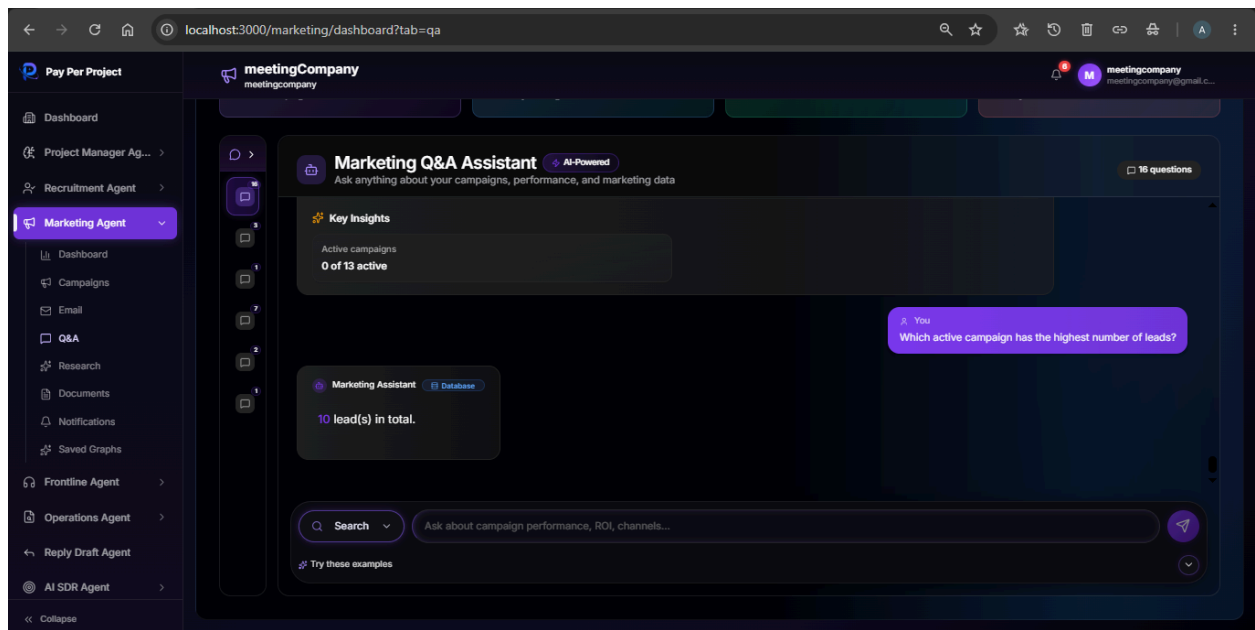

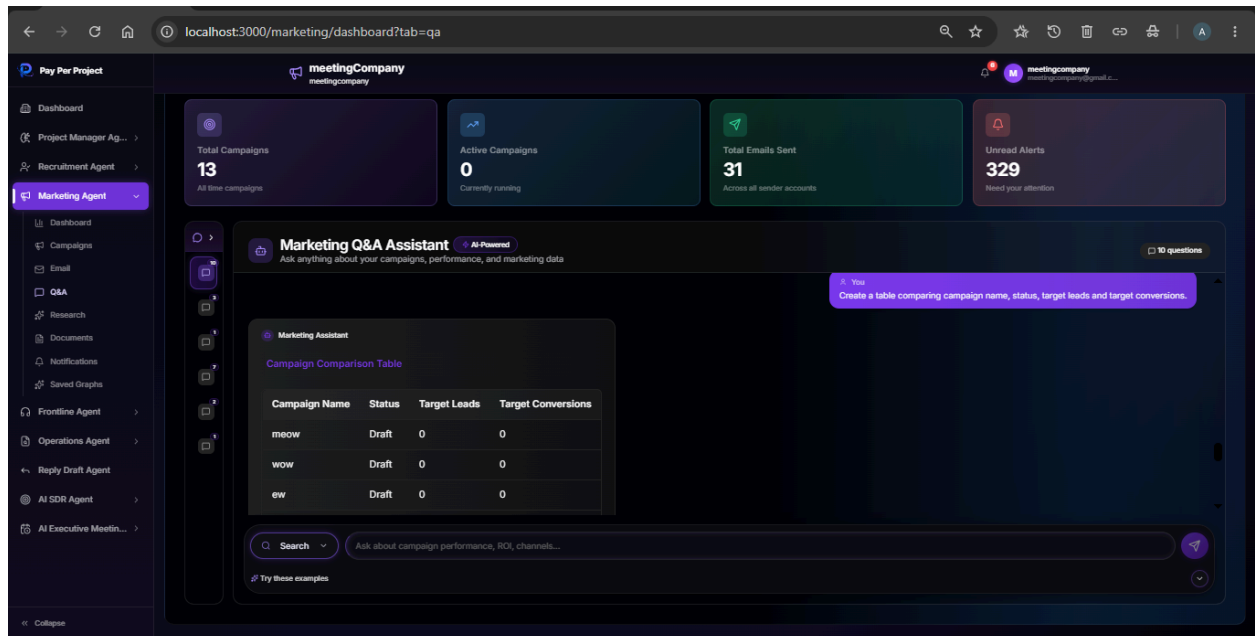

Tab
Q&A

Description/Steps to reproduce

Ask the agent for information about campaigns matching a specific condition when no campaigns satisfy that condition.

The agent returns unrelated or incorrect data instead of indicating that no matching campaigns are available.

Bug /Improvement 07

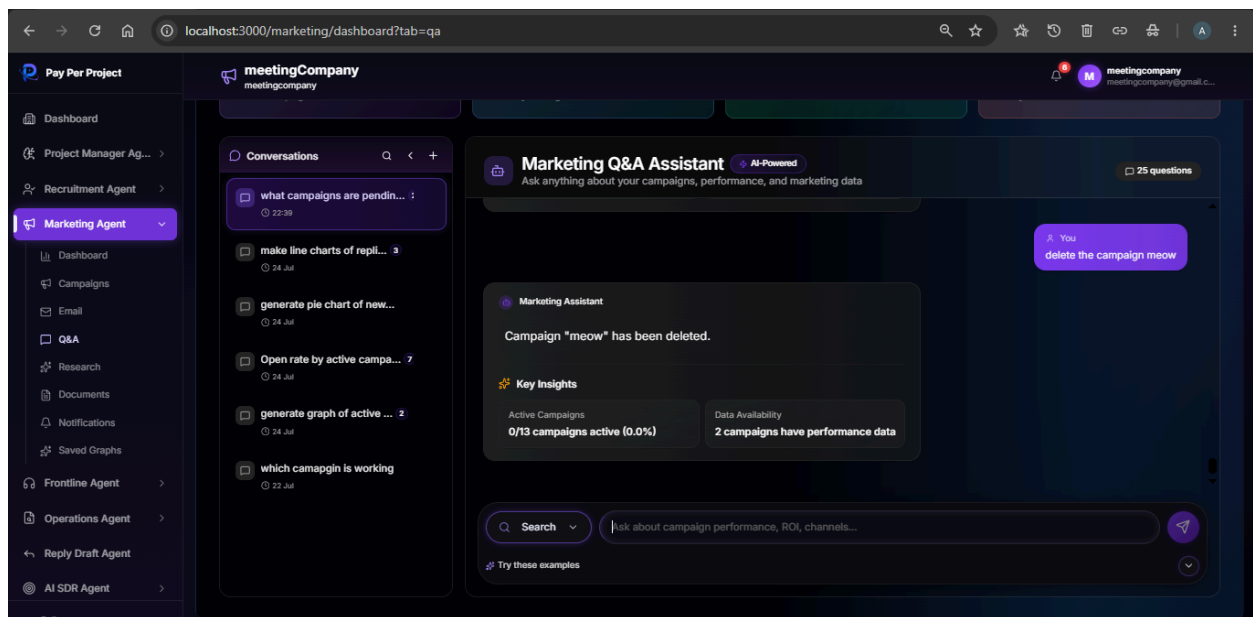

Tab
Q&A

Description/Steps to reproduce

Ask the agent to perform an action that it does not have permission/capability to perform, such as deleting a campaign.

The agent confirms that the action has been completed even though the campaign is not actually deleted.

The agent should not claim that an action was successfully performed unless the action is actually executed. It should clearly inform the user when an action is not supported or cannot be performed.

Bug / Improvement 08

Tab

Research

Description/Steps to reproduce

Select the **Opportunity** research category and ask a question related to a different research category, such as:

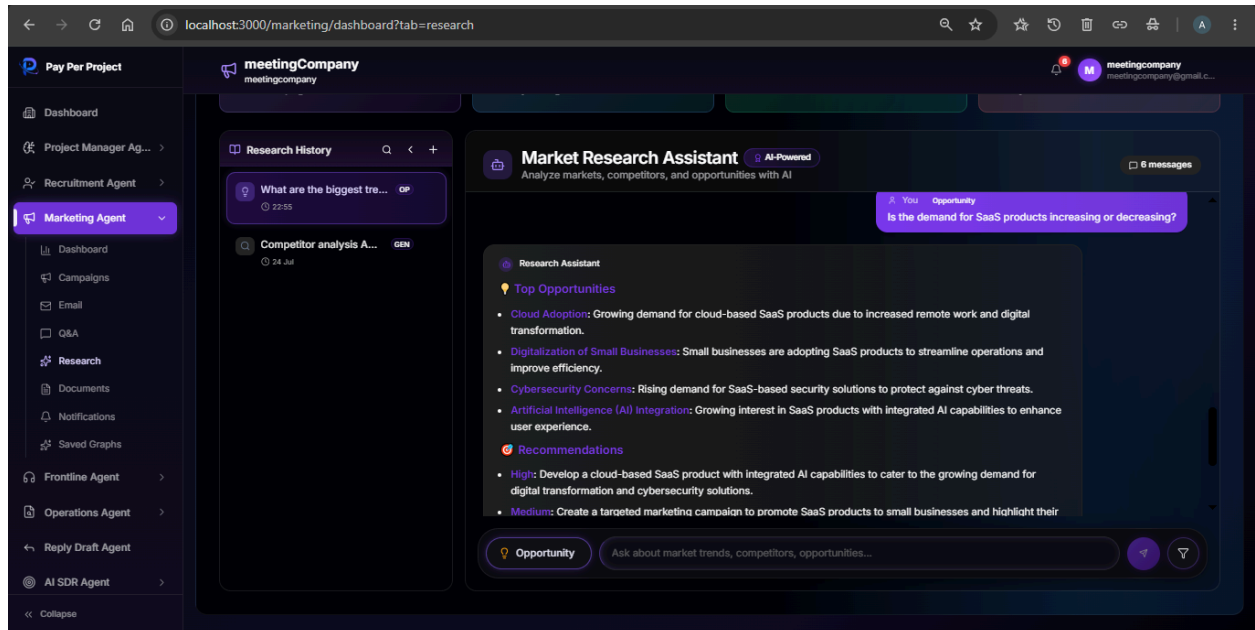

“Is the demand for SaaS products increasing or decreasing?”

The agent processes the question according to the selected category instead of recognizing that the question is related to **Market Trend**.

Expected Behaviour

The agent should identify the intent of the question and either:

- automatically use the appropriate research category, or
- notify the user that the selected category does not match the question and suggest switching to the relevant category.

Operations Agent

Tab

Documents

Description/Steps to reproduce

Go to Documents Tab Click upload document. Upload some faulty csv or any file. It shows technical error instead of a user friendly error.
